User Manual

Our application's purpose is to provide statistical data for movie streaming companies.

As a streaming company, we are limited with the movies we can show to our customers. We can't get the license for all the movies there is, so we need to make prioritization.

How do we choose the best value for money movies? Our app will help the company to find the best movies best on several criteria.

The appearance of the app will be:

For example, this option will match query 4 from our queries.

Each combo box will open the relevant variables for the query. The data we will receive will be shown in organized tables, and the research can be done on the data the user will receive.
